

INTENDED RESULTS

The project outputs will provide extensive knowledge of sustainable water management strategies and demonstrate adaption from farmers from all across Europe. These solution specific cases will serve as a learning tool to support farmers with similar issues.

An Open Educational Resources approach methodology has been used in this project for the development of digital training materials. These will be available freely for use and distribution.

Project publications and training will be available in **English, Spanish, Slovenian, German, Italian and French.**

Neither the European Union nor the granting authority can be held responsible for them.

BACKGROUND

Climate change has impacted the availability and quality of water in many European regions. Management of this is complex and lacking within and outside the farming sector, creating tensions between regions and enterprises.

As the primary user of water resources, agriculture has a responsibility to manage them. Missing short-term and long-term solutions and perspectives for sustainable solutions forms the basis for this project's aims.

PROJECT AIMS

- Raise awareness over the risks of water shortage and danger of pollution
- Develop training focused on optimised water use and quality
- Share case studies related to more efficient and less polluting farming techniques

OBJECTIVES

The objective of the EUWAY Project is to build knowledge, skills, attitudes, and values related to excellent and sustainable water management practices on farms.

The purpose of exchanging project work and entrepreneurial experiences is to enrich and speed up necessary developments of the sector in Europe.

OUTPUTS

The EUWAY Project will develop several free and open-access educational materials available on the project website and disseminated through social media.

Educational materials will include a summary guide of European water use and case studies with best practices.

The project will also develop a training platform to help farmers consider new agricultural strategies that redefine water management while maintaining high-quality products.

EUWAY is a Cooperation Partnership funded by the EU **Erasmus+ Programme** for education and training.

Countries

Belgium, Germany, Ireland, Italy, Slovenia, and Spain. Involving seven partner organisations and is coordinated by ELO.
